

I can explore the different sounds I can make using musical instruments or everyday objects such as spoons, pots and plastic bowls

| What should the adult do? | What other skills does this activity help with? |
|--|--|
| <p>Look at the photographs below of Julie demonstrating her 'Rainbow Time' activity of making a musical instrument with things you will have at home. Depending on what you are using inside the bottle, you might be able to talk about the sizes and shapes of the items, which will help to develop your child's maths skills. Use lots of language when describing the things you are using, drawing child's attention to the colours, size, shapes. Could you count the items as you put them into the bottle?</p> <p>Next, watch the video below - Video 1, where she follows on to allow child to decorate the bottle with paint and cotton buds. This will support child's physical and fine motor skills and practice creative skills. Mixing colours is also a great skill to learn and practice with your child. Julie is allowing child to explore independently and her interests change throughout the activity and this is fine too.</p> <p>Enjoy singing lots of songs with your new instrument!</p> | <p>Physical Development - moving and handling</p> <p>Communication - speaking, listening and attention & understanding</p> <p>Maths - shape, space and measure and number.</p> <p>Expressive arts - exploring music and materials and singing favourite songs.</p> |
